Foreword	xv	Meeting Challenges Successfully: The Adaptive Response	19
Florence Clark, Ph.D., OTR, FAOTA		Using Sensory Integration in Conjunction With Other Approaches	19
Preface	xix	Outcomes and Effectiveness of Intervention	20
Susanne Smith Roley, M.S., OTR		Efficacy Research	21
Erna Imperatore Blanche, Ph.D., OTR, FAOTA		References	23
Roseann C. Schaaf, M.Ed., OTR/L, FAOTA		2. Neuroplasticity and the Environment: Implications for Sensory Integration	29
Acknowledgments	xxiii	S. Esste Jacobs, Ph.D., OTR Mary L. Schneider, Ph.D., OTR	
<hr/>			
Part I. Theoretical Foundations			
1. Sensory Integration Revisited:			
A Philosophy of Practice 3			
Susan Spitzer, M.A., OTR			
Susanne Smith Roley, M.S., OTR			
Dr. A. Jean Ayres	3	The Organism-Environment Interaction	29
Sensory Integration: A Foundation for Occupation	5	Brain Growth: A Protracted Process	31
Necessity of Integrated Sensation	6	Genes and Environment	31
The Adaptive Response and Self-Direction	8	Synaptogenesis and Synapse Elimination	32
The Dynamic Process of Sensory Integration	9	The Role of Neural Activity in Synapse Connectivity	32
The Role of Sensory Integration in Development	12	Hebb Synapse	32
Building Occupational Performance	14	Long-Term Potentiation (LTP)	33
Sensory Integration and Daily Occupations	14	<i>Properties of LTP</i>	33
Assessing Sensory Integrative Functioning: A Guide to Intervention	14	The Role of Behavior on Synapse Modification	35
Using a Sensory Integrative Approach for Children With Developmental Disabilities	16	Experience-Dependent Cortical Plasticity	35
Sensory Alchemy	16	The Effects of Prenatal Stress on Function	37
Play and Self-Direction	18	Alcohol and Stress During the Prenatal Period	38
		Implications for Sensory Integration	38
		References	40

3. Developmental Neuroplasticity: A Foundation for Sensory Integration 43	The New Theoretical Model 59
Gary W. Kraemer, Ph.D., OTR	Elements of the Ecological Model of SMD 59
Mammalian Mothers and Infants as Dynamic Systems 43	<i>The Four External Dimensions</i> 59
The Mother-Young Relationship in Animals 45	<i>The Three Internal Dimensions</i> 60
The Infant Becomes Experienced Through the Mother 45	Study Protocol 62
Mothers Learn About and From Their Infants: Behavioral Effects 45	Descriptions of the Five Cohorts in This Study 62
Transgenerational Integration 46	<i>Children Who Are Typically Developing (Typical)</i> 62
Maternal Deprivation 47	<i>Children With Fragile X Syndrome (FXS)</i> 62
The Bridge Between Science and Practice 48	<i>Children With Autistic Disorder (Autistic)</i> 63
Holistic Versus Multiple Systems 48	<i>Children With Attention Deficit Disorders (AD/HD)</i> 63
The Psychobiological or Holistic View: Developmental Trajectory 50	<i>Children With Symptoms of SMD and No Other Disorder (SMD)</i> 63
<i>Interaction and Integration</i> 50	Instrumentation 64
<i>Adaptive Plasticity and Trajectories</i> 51	The Sensory Challenge Protocol 64
<i>Trajectories and Stages of Development</i> 51	Parent Report Scales 65
<i>Plasticity of the Whole Individual</i> 52	SMD in Children With Developmental Disabilities 67
References 54	Relation of Findings to Ecological Model of Sensory Modulation 67
Additional Readings 55	Findings: Fragile X Syndrome and Autistic Disorder Compared to Children Who Are Typically Developing 70
4. An Ecological Model of Sensory Modulation: Performance of Children With Fragile X Syndrome, Autistic Disorder, Attention-Deficit/ Hyperactivity Disorder, and Sensory Modulation Dysfunction 57	<i>Fragile X Syndrome</i> 70
Lucy Jane Miller, Ph.D., OTR	<i>Autistic Disorder</i> 71
Judith E. Reisman, Ph.D., OTR, FAOTA	Findings: AD/HD and SMD Compared to Typical 73
Daniel N. McIntosh, Ph.D.	<i>AD/HD</i> 73
Jodie Simon, Ph.D.	<i>Sensory Modulation Dysfunction</i> 76
Defining Sensory Modulation 57	Comparison of AD/HD and SMD 76
Is Sensory Modulation Dysfunction a Valid Syndrome? 58	Moving From Data Back to Model 77
Behavioral Symptoms of Dysfunction in Sensory Modulation 58	Limitations of This Study and Additional Questions 77
Physiological Symptoms of Sensory Modulation Dysfunction 59	References 79
	Appendix 4A Definitions of Terms 83
	Appendix 4B Sensory Challenge Protocol 85

5. From Neuron to Behavior: Regulation, Arousal, and Attention as Important Substrates for the Process of Sensory Integration	89	6. Proprioception: A Cornerstone of Sensory Integrative Intervention	109
Gretchen Dahl Reeves, Ph.D., OT/L, FAOTA		Erna Imperatore Blanche, Ph.D., OTR, FAOTA	
		Roseann C. Schaaf, M.Ed., OTR/L, FAOTA	
Processes of Regulation	89	What is Proprioception?	110
Neural Regulation	89	Proprioception Versus Kinesthesia	110
Self-Regulation	89	Proprioceptive Receptors	111
Homeostasis	90	Proprioceptive Integration	112
Modulation	90	Proprioceptive-Tactile Integration	112
Sensory Integration and Regulation	90	Proprioceptive-Vestibular Integration	112
Neuronal Basis of Regulation	92	An Emerging View of Proprioception: Discriminative and Modulatory Functions	113
Neuronal Activity and Synaptic Transmission	92	The Modulating Role of Proprioception	113
Habituation and Sensitization: Simple Forms of Learning Based on Neuron Response	92	Discriminative Proprioception	113
Arousal and Attention: Foundation for Higher-Level Learning	93	A New Framework for Understanding Proprioceptive Dysfunction	114
Interaction of Multiple Systems	93	Hyporesponsivity to Proprioceptive Input	115
Neuroanatomic Components of Regulation	94	Proprioceptive Seeking	116
Brainstem	94	Gravitational Insecurity	116
<i>Reticular System</i>	94	Proprioceptive Sensitivity	117
<i>Neurotransmitter Systems of the Brainstem</i>	96	Postural Insecurity?	117
Hypothalamus	97	The Use of Proprioception in Intervention	118
