# Animals 1

## Vocabulary

alive

drought

non-living

# Vocabulary Definitions

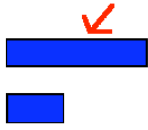

**alive**

When something is living.

**drought**

A long

time

of very

dry

weather.

**non-living**

Something

that

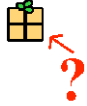

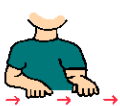

has

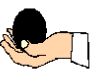

never been alive.

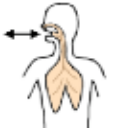

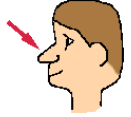

# What Does Alive Mean?

 What does it mean when an animal

 is **alive**? It means that it breathes air, eats food,

 drinks water, and has babies.

 Everything that is alive needs air. We

 breathe air through our noses. So do lots

 of animals. But some animals breathe differently. A fish,

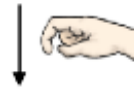

for example, gets air from the water. The water

goes into the gills, and the air is taken from the

water and used by the fish.

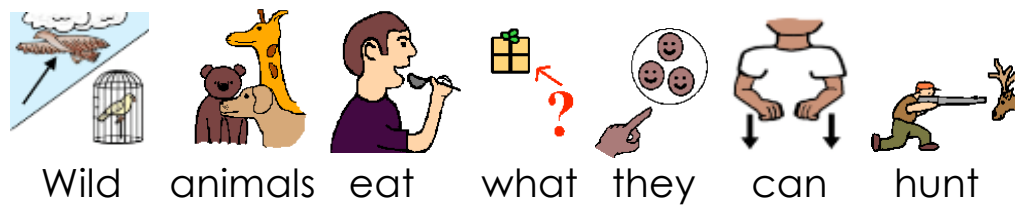

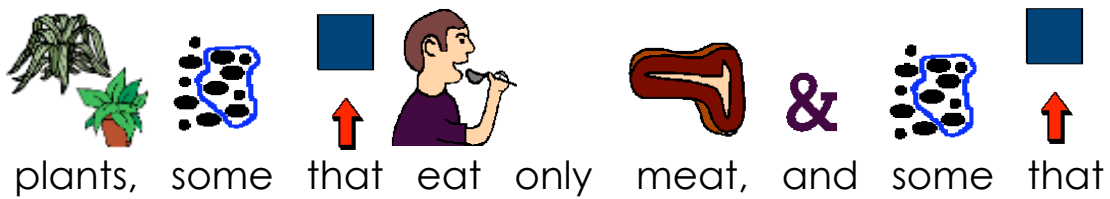

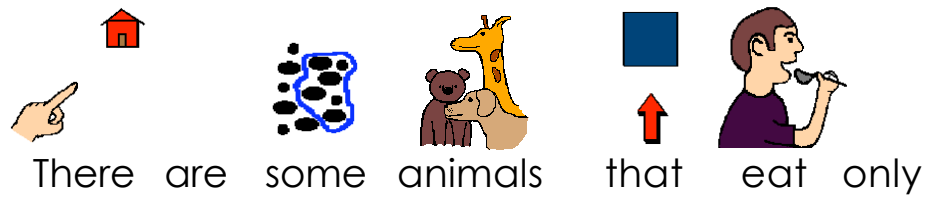

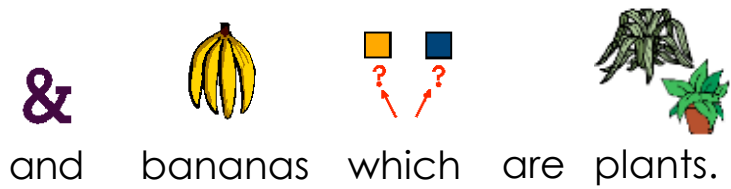

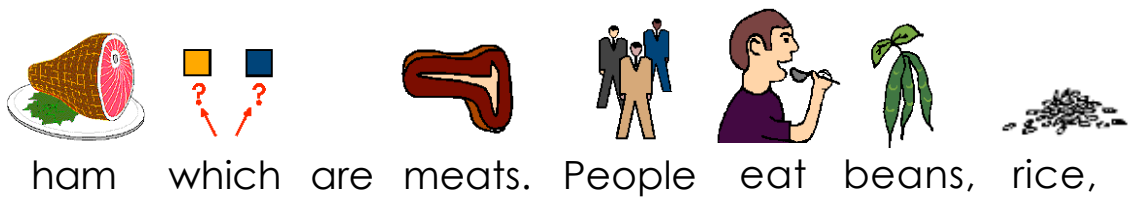

All living things need food to eat.

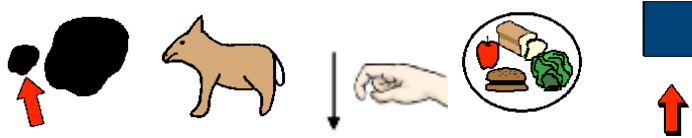

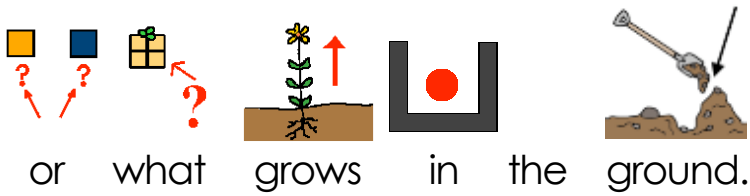

Can you name some of the foods you like

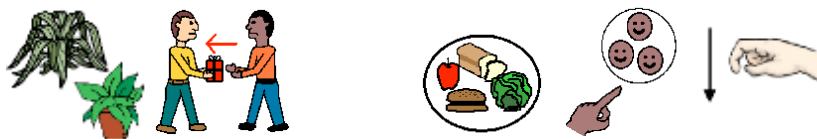

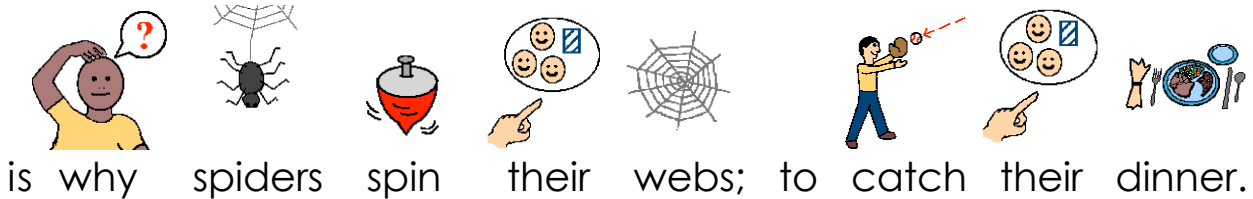

to eat? People can eat hamburgers, roasts, and

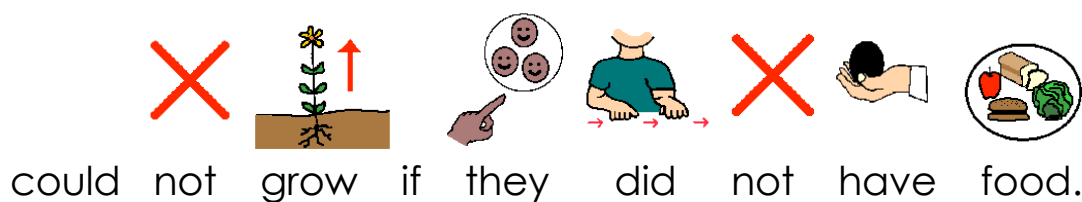

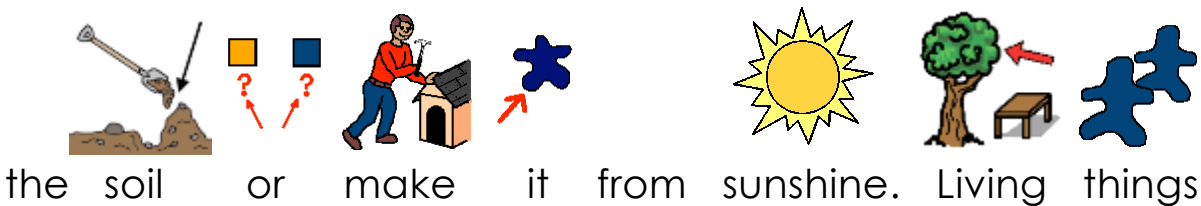

Even the tiniest animal needs food. That

Plants take the food they need from

Water is important for all life. We

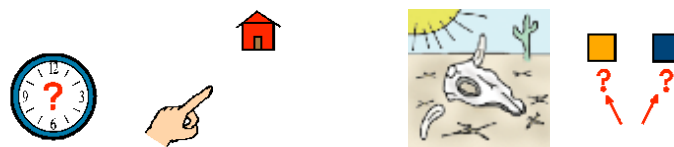

must have water, and everything that is alive

must have water to drink. The water we drink

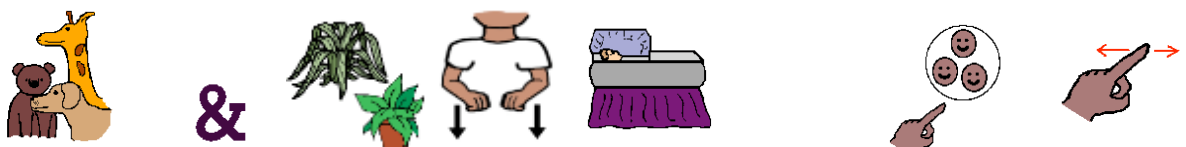

helps our bodies work right.

When there is a **drought**, which means

there has been no rain for a long, long time,

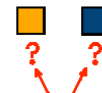

animals and plants can die because they do not

have enough water.

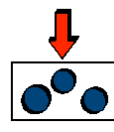

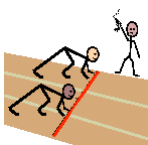

Animals have young. That means they

have babies. The young are either born or are hatched

from eggs. Plants produce seeds that fall to the ground

and start new plants. These are the ways animals

200\_
